CIONS

For Sale Spring and Summer 1916

I can only supply cions of the following this spring and these only in limited quantity:

English Walnuts: Wiltz Mayette and Vrooman Franquette. These are the finest varieties of their respective types and the trees are fully as hardy as any others that we have. Owing to the superior quality and appearance of their fruit, these varieties are sure to take the lead in eastern or northern planting. For description of these fine varieties and further information on the hardy French walnuts, see the supplementary list, spring 1916.

Pecans: Indiana and Busseron. These are among the largest nuts of the northern pecans and are perhaps the best in all good points taken together. The trees also originated further north than any others that we now have and the original trees, near Oaktown, Ind., are noted for their heavy and regular bearing.

Cions for grafting of the above 5 cts. per graft; grafts 5 to 6 inches long and with not less than two buds to the graft. Larger size, select wood, for spring patch budding, 3 cts. per bud, by mail postpaid. Cions can be sent at the proper time to do the work. The best season for grafting in this latitude is after the sap is getting up well in the stocks and is from May 1st to 25th. Spring budding, with buds of the previous season's growth, can be done at any time after the sap is getting up well and the bark peels readily, but should be done not later than June 10th, in this latitude, if the buds are to be forced into growth the same season. With all orders for grafts, I send enough Raffia to tie the grafts properly, or enough waxed muslin to tie the buds properly if bud-wood is ordered. When ordered, I send two sample grafts, grafted into stubs, tied and sealed, just as I put them in in my own grafting, together with directions for making wax and the subsequent treatment of the grafts, for 50 cts. to cover the cost and trouble of doing the work, packing and mailing. My method of grafting Nut Trees is original and in several important points is unlike any other. With these samples, one can see just how the work is done by an expert grafter, and there is no guess work as to how to get at the work properly. Full directions for Patch Budding are sent with the budding tools.

Summer Budding. After July 15th, I can supply bud wood of the current season's growth, for patch budding, of the following: ENGLISH WALNUTS: Wiltz Mayette, Vrooman Franquette, Rush and Nebo. PECANS: Indiana, Busseron, Warrick and Green River. BLACK WALNUTS: Thomas. Summer buds 2½ cts. each, carefully packed and sent parcels post prepaid. No order for grafts or buds filled for less than \$1.00.
